Introduction

The document describes how to install the **Covcheck** application server and configure a Galaxy Gate so that COVID certificates and tests presented at the gate can be validated through the server's REST API.

Installation of Covcheck Application Server

Prerequisites

- Ubuntu 22.04 with Internet access
- User with **sudo** permissions and availability of a user with ID 1000 (**cat /etc/passwd | grep 1000**), which is by default
- Archive **covcheck-installer.tar.gz** with the files listed in [Installation Files](#). The name **covcheck-installer.tar.gz** can include a version, e.g. **covcheck-installer-v0.1.tar.gz**

Installation Steps

- Connect with **ssh** to the Ubuntu server
- Copy **covcheck-installer.tar.gz** to the local directory
- Execute the following command:

```
tar xvf covcheck-installer.tar.gz && cd ./covcheck-installer
```

Covcheck

- Modify file `.env` and specify the database password (**POSTGRES_PASSWORD**) and, if necessary, host name (**ODOO_HOST_NAME**) and timezone (**TZ**):

```
POSTGRES_PASSWORD=gR7K6GT8MvQHpvLs
ODOO_HOST_NAME=covcheck.maxcr.de
TZ=Europe/Berlin
```

- If SSL certificates are provided for domain name **ODOO_HOST_NAME**, put them into directory **/etc/nginx/certs**, e.g:

```
sudo mkdir -p /etc/nginx/certs
sudo tar xvf certs.tar.gz -C /
```

- If SSL certificates are not available, HTTP connection will be used and you need to modify file ****docker-compose**** accordingly:

- Add this section to container ****odoo****:

```
ports:
- 80:8069
```

- Comment out or remove port 80 for container ****nginx_proxy****:

```
ports:
# - 80:80
- 443:443
```

- Run the installer script:

```
script=install-covcheck.sh && chmod +x $script && ./$script -i
```

- The installation is finished successfully if you see this line in the shell:

```
### Installation finished successfully
```

Covcheck

You can make sure that the Covcheck is installed and running by executing the following command:

```
curl https://covcheck.maxcrc.de/covcheck/status
```

The reply must be a JSON like as follows:

```
{  
  "status": "ok",  
  "last_update": "2022-07-04 12:06:34"  
}
```

Installation Files

.env

environment variables

covcheck.tar.gz

archived covcheck and request_extension ODOO addons

docker-compose.yml

docker compose file

git-submodule-status

information about git submodules that comprise the Covcheck application server

install-covcheck.sh

primary installation script

nginx-vhost

template vhost file for nginx

odoo.conf

configuration file for ODOO

Configuration of Covcheck Application Server

Change Default Password

Open the address of the server in a browser and logging using the following default credentials:

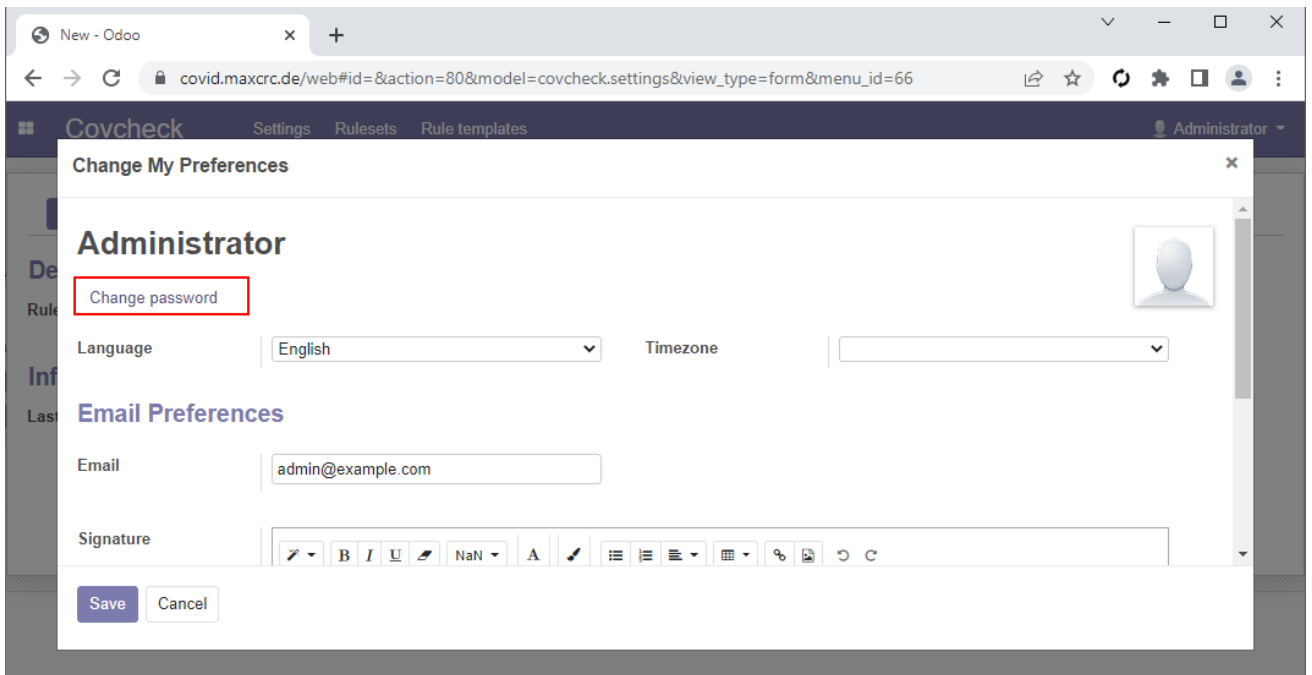

Username	Password
admin	admin

Click the **Administrator** in the top right corner and then **Preferences**:

In the opened window click **Change password**:

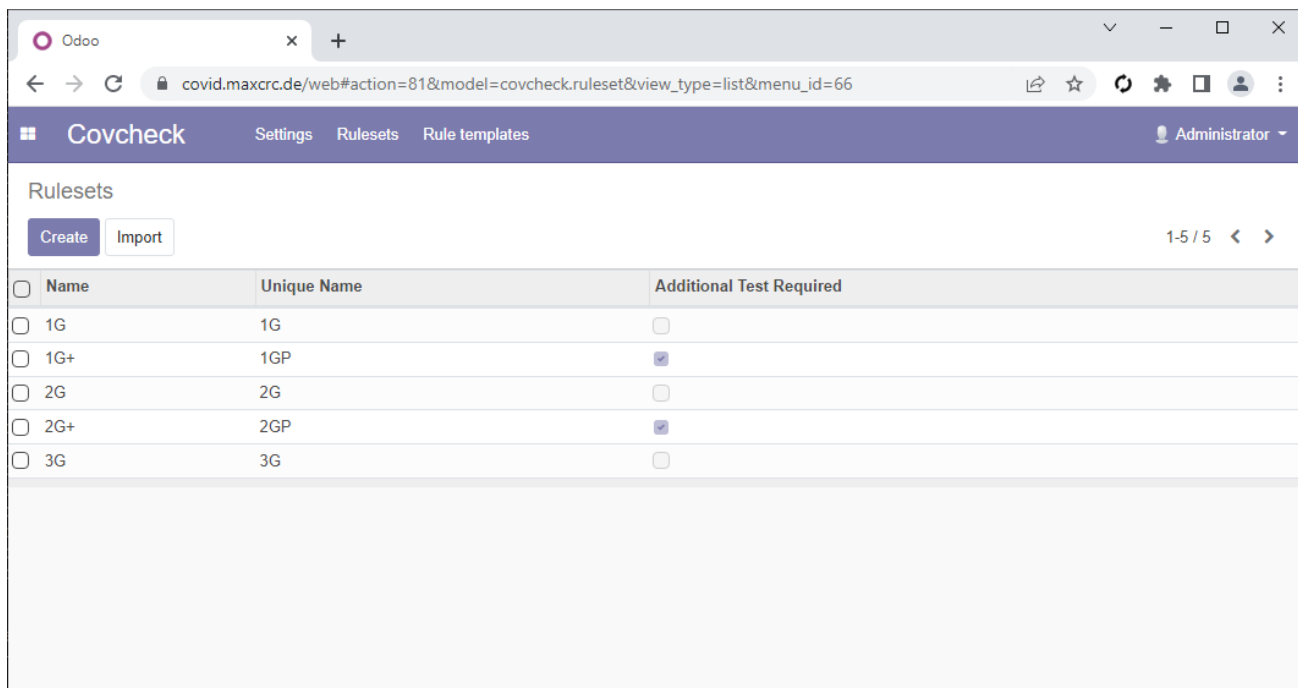

Fill-in the following fields and then click **Change Password**:

- Old Password
- New Password
- Confirm New Password

Managing Rulesets

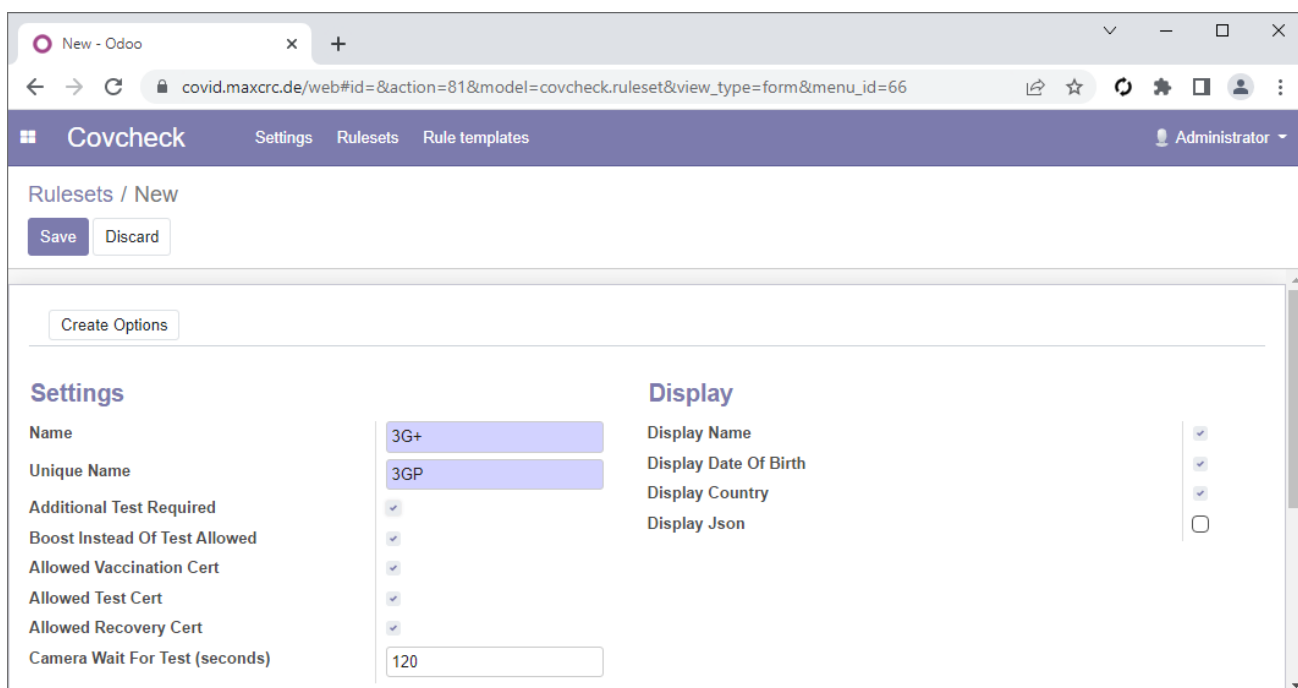

You can add, modify and delete rulesets on the **Rulesets** page:

The screenshot shows the 'Rulesets' page in the Odoo application. The browser address bar shows the URL: covid.maxcrc.de/web#action=81&model=covcheck.ruleset&view_type=list&menu_id=66. The page header includes 'Covcheck', 'Settings', 'Rulesets', and 'Rule templates', along with a user profile 'Administrator'. The main content area is titled 'Rulesets' and features 'Create' and 'Import' buttons. A table lists existing rulesets with columns for 'Name', 'Unique Name', and 'Additional Test Required'. The table contains five rows: 1G, 1G+, 2G, 2G+, and 3G. The 'Additional Test Required' column has checkboxes, with '1G+' and '2G+' checked.

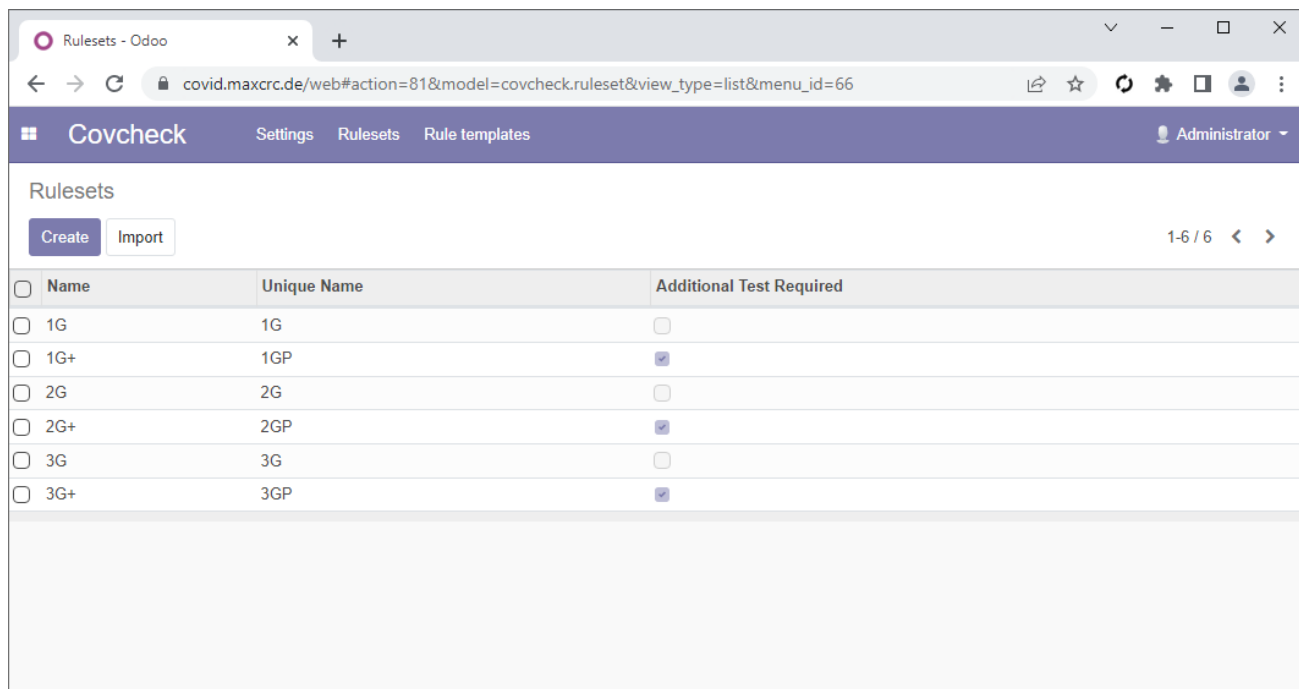

<input type="checkbox"/>	Name	Unique Name	Additional Test Required
<input type="checkbox"/>	1G	1G	<input type="checkbox"/>
<input type="checkbox"/>	1G+	1GP	<input checked="" type="checkbox"/>
<input type="checkbox"/>	2G	2G	<input type="checkbox"/>
<input type="checkbox"/>	2G+	2GP	<input checked="" type="checkbox"/>
<input type="checkbox"/>	3G	3G	<input type="checkbox"/>

For example, let us create a ruleset **3G+**, which requires an additional test. Click **Create** fill-in the fields **Name** and **Unique Name**, check **Additional Test Required** and click **Save**:

The screenshot shows the 'Rulesets / New' form in the Odoo application. The browser address bar shows the URL: covid.maxcrc.de/web#id=&action=81&model=covcheck.ruleset&view_type=form&menu_id=66. The page header includes 'Covcheck', 'Settings', 'Rulesets', and 'Rule templates', along with a user profile 'Administrator'. The main content area is titled 'Rulesets / New' and features 'Save' and 'Discard' buttons. A 'Create Options' button is also visible. The form is divided into two sections: 'Settings' and 'Display'. The 'Settings' section includes fields for 'Name' (3G+), 'Unique Name' (3GP), 'Additional Test Required' (checked), 'Boost Instead Of Test Allowed' (checked), 'Allowed Vaccination Cert' (checked), 'Allowed Test Cert' (checked), 'Allowed Recovery Cert' (checked), and 'Camera Wait For Test (seconds)' (120). The 'Display' section includes checkboxes for 'Display Name' (checked), 'Display Date Of Birth' (checked), 'Display Country' (checked), and 'Display Json' (unchecked).

The list now includes the **3G+** ruleset:

<input type="checkbox"/>	Name	Unique Name	Additional Test Required
<input type="checkbox"/>	1G	1G	<input type="checkbox"/>
<input type="checkbox"/>	1G+	1GP	<input checked="" type="checkbox"/>
<input type="checkbox"/>	2G	2G	<input type="checkbox"/>
<input type="checkbox"/>	2G+	2GP	<input checked="" type="checkbox"/>
<input type="checkbox"/>	3G	3G	<input type="checkbox"/>
<input type="checkbox"/>	3G+	3GP	<input checked="" type="checkbox"/>

Configuration of Galaxy Gate

In order COVID certificates and tests can be validated against the Covcheck server, the proper dispatcher and display must be selected and configured.

Dispatcher

Open the URL of the gate, login with user **wanzl** and navigate to the **Configuration** page. Select tab **Dispatchers** and click **Add**:

In the combo box under the title **Dispatcher** select **Covcheck**, modify the following properties if needed and click **Save**:

URL

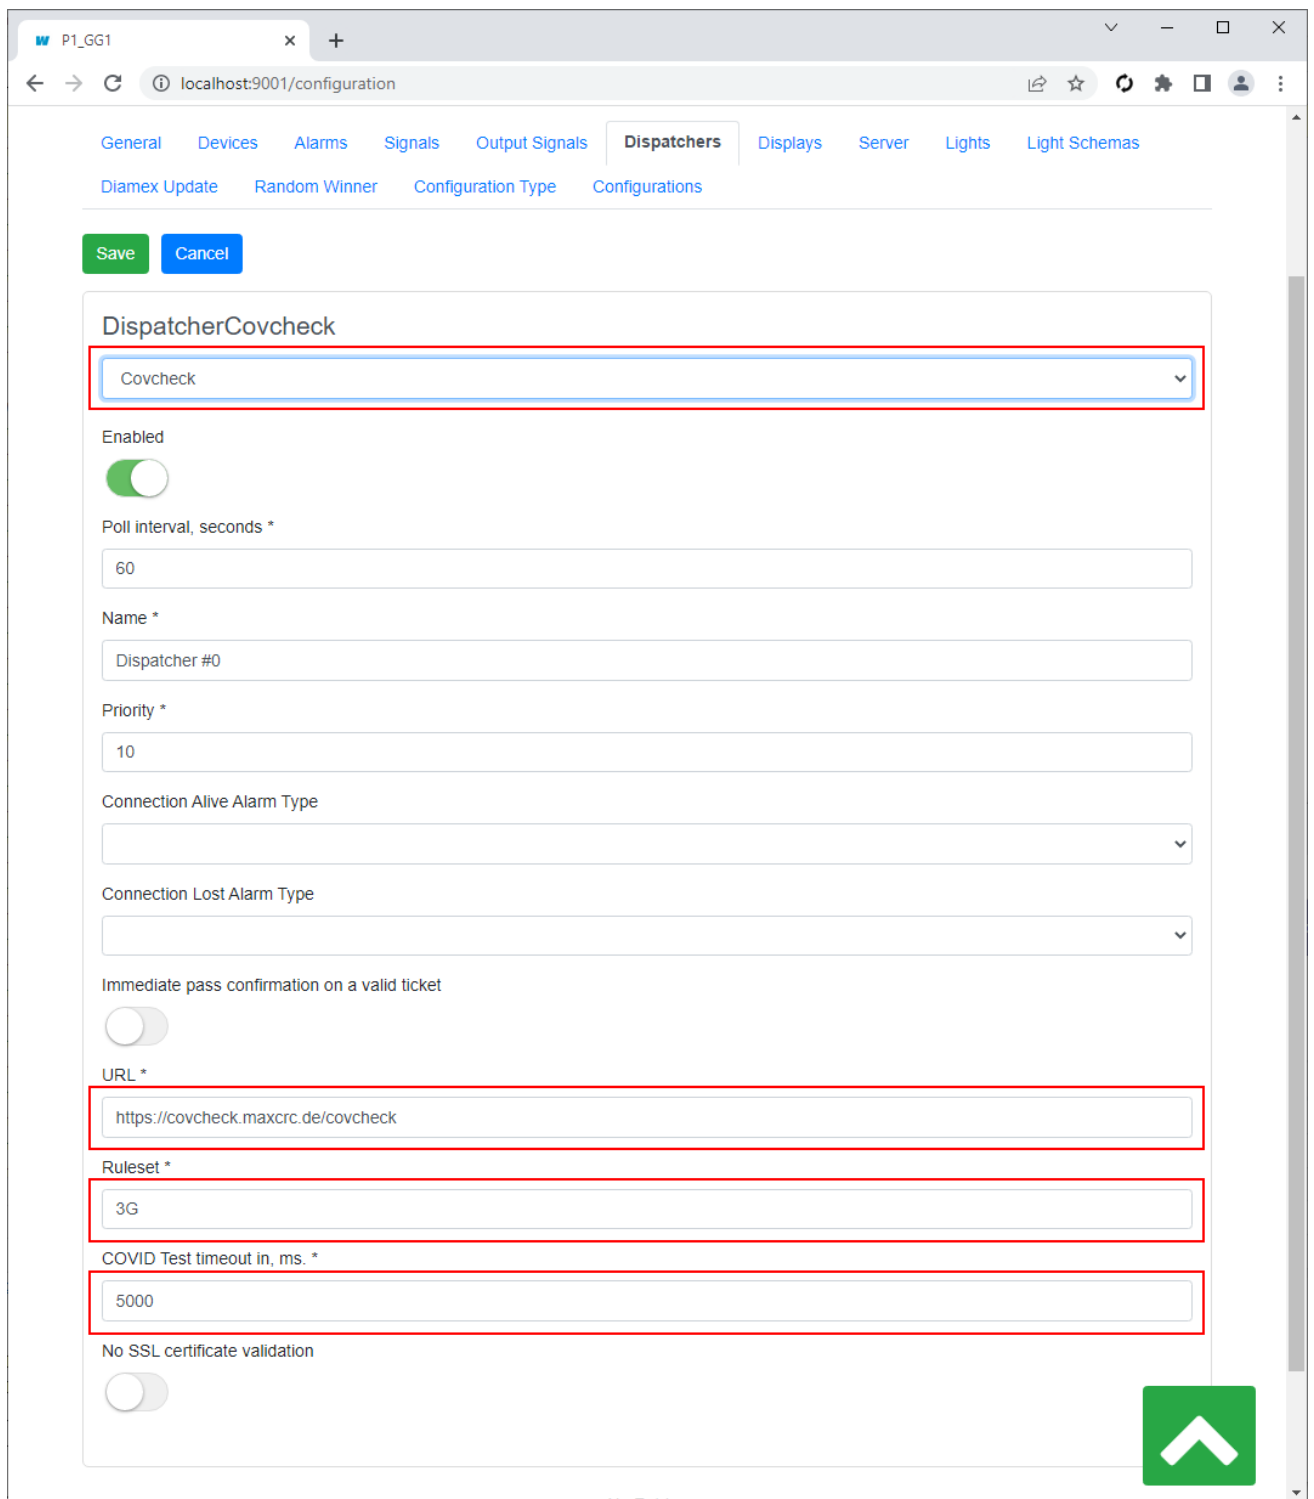

Base URL of Covcheck's API

Ruleset

Ruleset for validating COVID certificates and tests

COVID Test timeout, ms

When a COVID test is required, specifies the timeout of waiting for it

DispatcherCovcheck

Covcheck

Enabled

Poll interval, seconds *
60

Name *
Dispatcher #0

Priority *
10

Connection Alive Alarm Type

Connection Lost Alarm Type

Immediate pass confirmation on a valid ticket

URL *
https://covcheck.maxcrc.de/covcheck

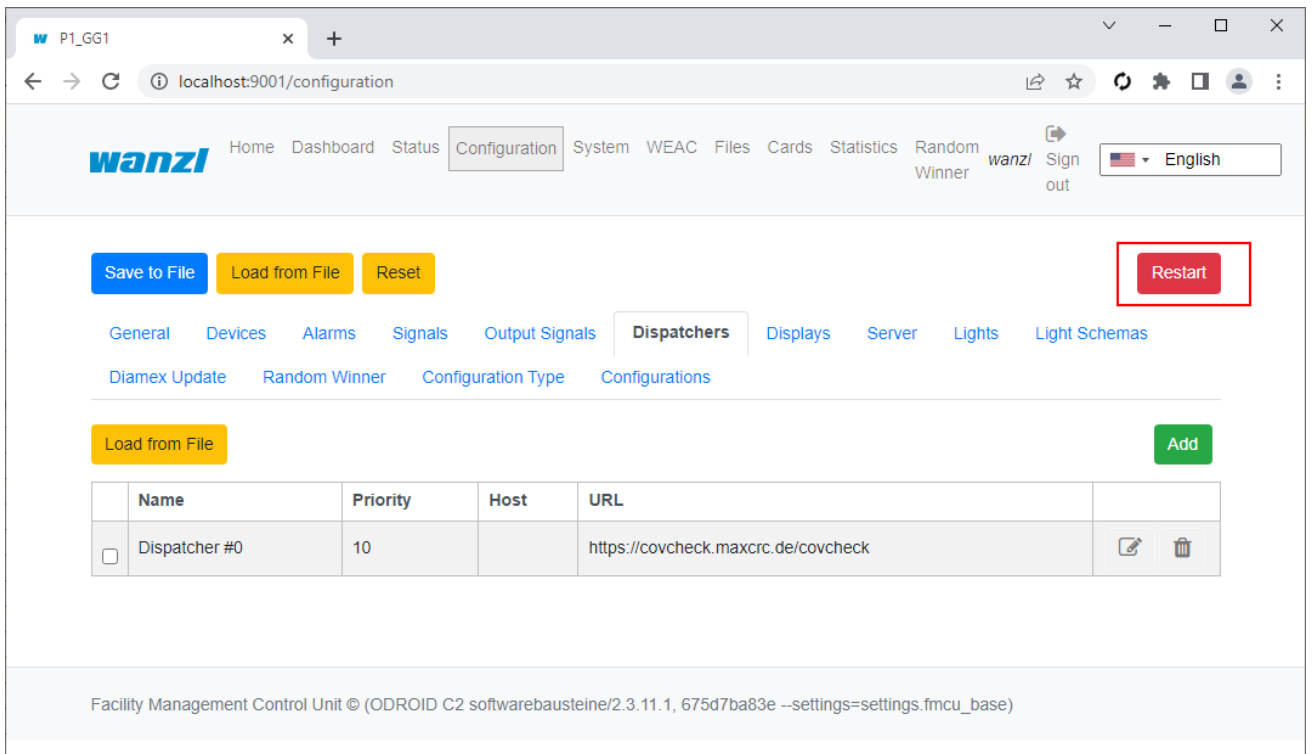

Ruleset *
3G

COVID Test timeout in, ms. *
5000

No SSL certificate validation

Restart the gate:

Covcheck

Browser: P1_GG1, localhost:9001/configuration

Navigation: Home, Dashboard, Status, **Configuration**, System, WEAC, Files, Cards, Statistics, Random Winner, wanzl, Sign out

Buttons: Save to File, Load from File, Reset, **Restart**

Sub-navigation: General, Devices, Alarms, Signals, Output Signals, **Dispatchers**, Displays, Server, Lights, Light Schemas

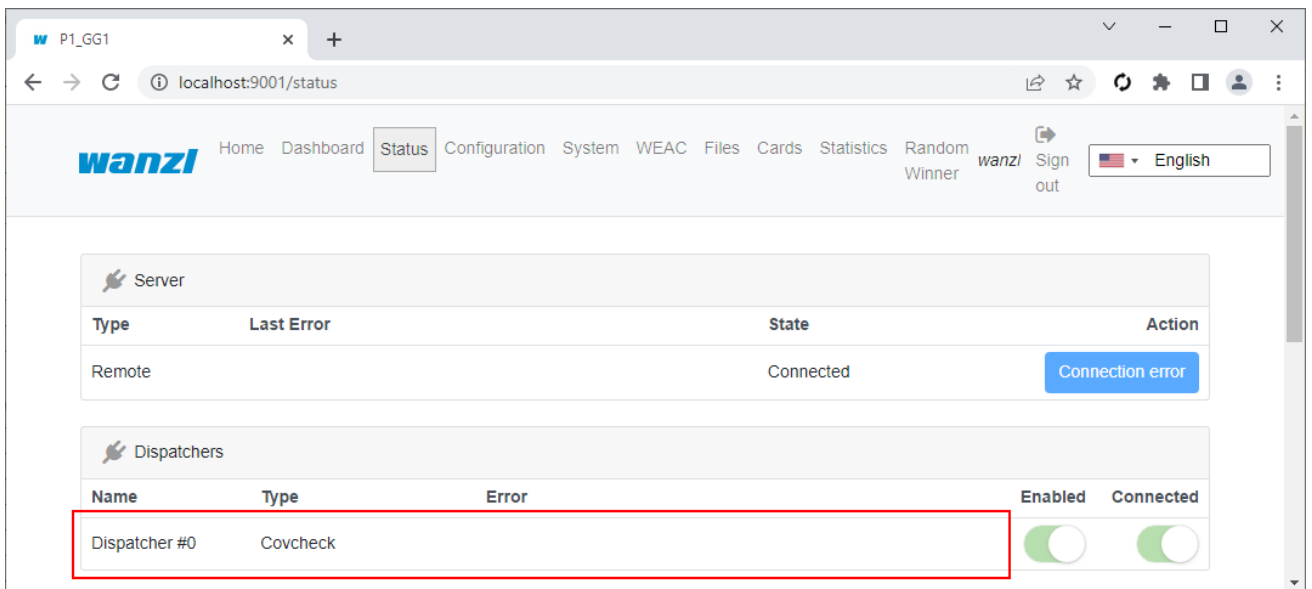

Additional: Diamex Update, Random Winner, Configuration Type, Configurations

	Name	Priority	Host	URL	
<input type="checkbox"/>	Dispatcher #0	10		https://covcheck.maxcrc.de/covcheck	 

Buttons: Load from File, Add

Footer: Facility Management Control Unit © (ODROID C2 softwarebausteine/2.3.11.1, 675d7ba83e --settings=settings.fmcu_base)

If the Covcheck server is available, the **Error** field is empty:

Browser: P1_GG1, localhost:9001/status

Navigation: Home, Dashboard, **Status**, Configuration, System, WEAC, Files, Cards, Statistics, Random Winner, wanzl, Sign out

Server Section:

Type	Last Error	State	Action
Remote		Connected	Connection error

Dispatchers Section:

Name	Type	Error	Enabled	Connected
Dispatcher #0	Covcheck		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Display

Open the URL of the gate, login with user **wanzl** and navigate to the **Configuration** page. Select tab **Displays** and click **Add**:

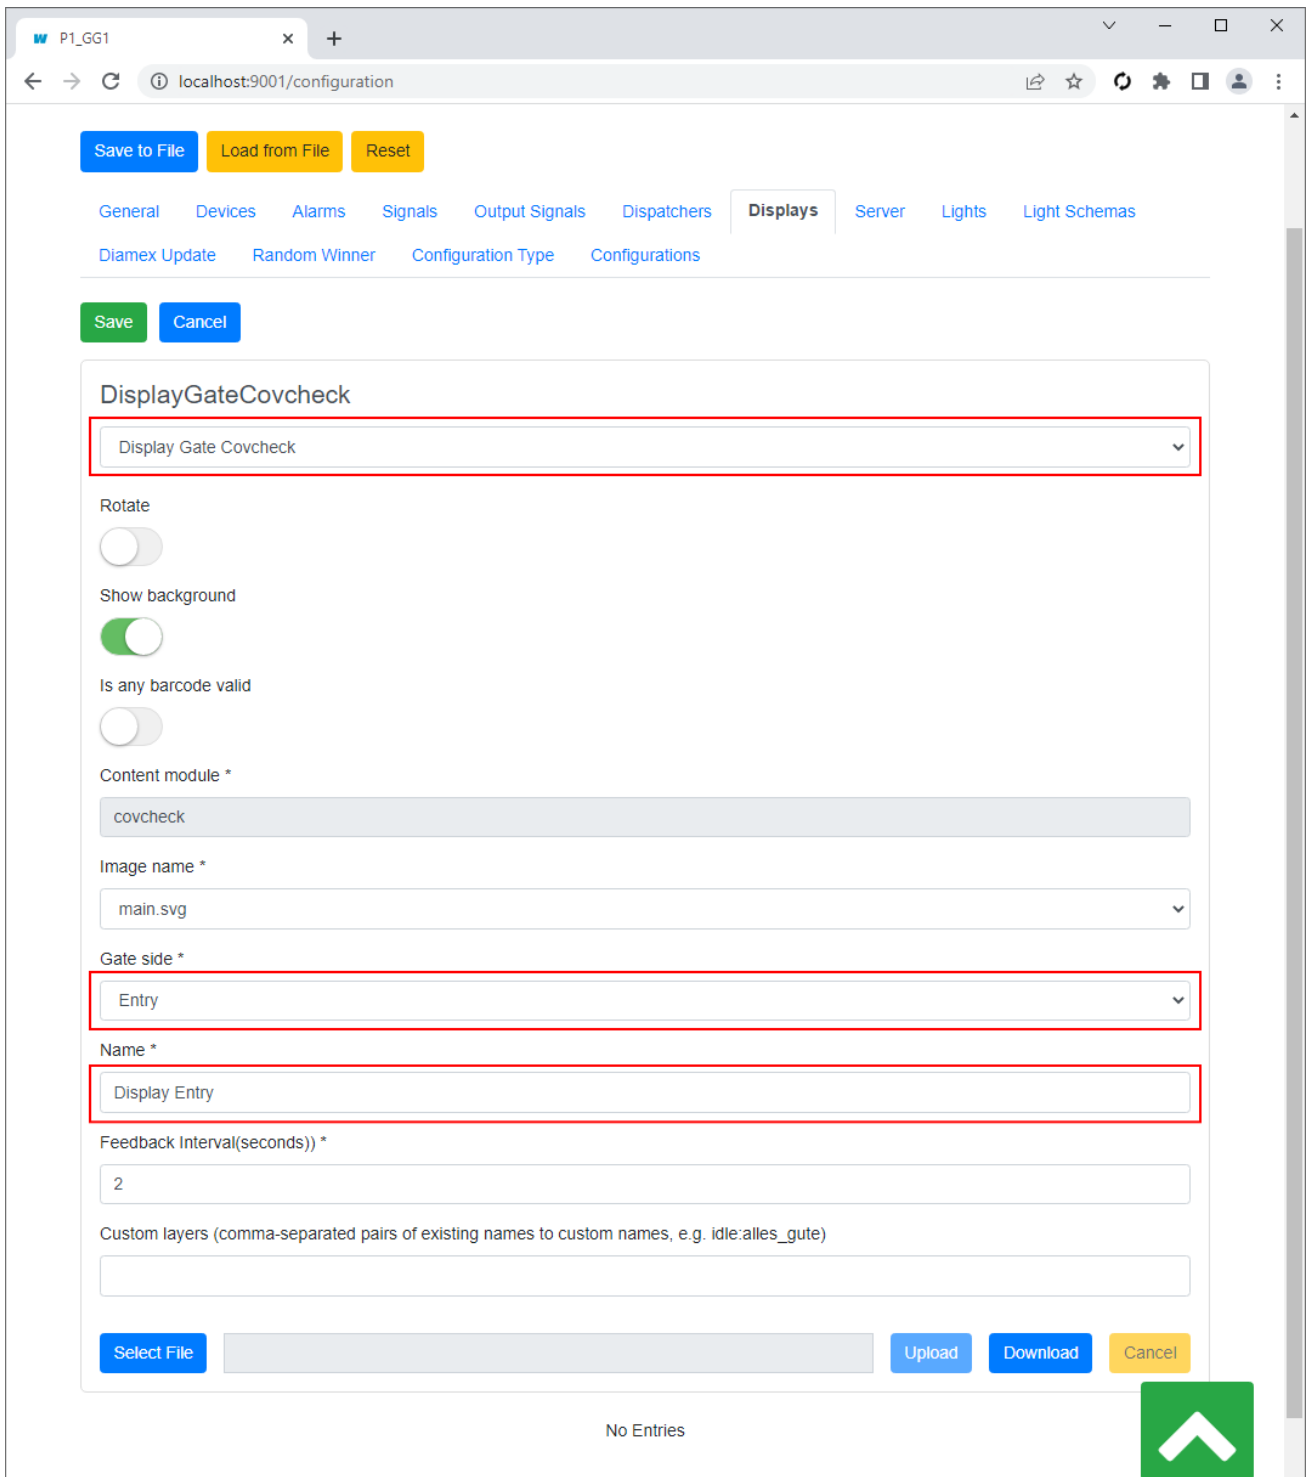

In the combo box under the title **Display** select **Display Gate Covcheck**, modify the following properties if needed and click **Save**:

Gate side

Side of the display, **Entry** or **Exit**

Name

User-friendly name

The screenshot shows a web browser window at localhost:9001/configuration. The interface includes navigation tabs for General, Devices, Alarms, Signals, Output Signals, Dispatchers, **Displays**, Server, Lights, and Light Schemas. Below these are sub-tabs for Diamex Update, Random Winner, Configuration Type, and Configurations. At the top of the configuration area are buttons for 'Save to File', 'Load from File', and 'Reset'. The main configuration section for 'DisplayGateCovcheck' contains the following fields:

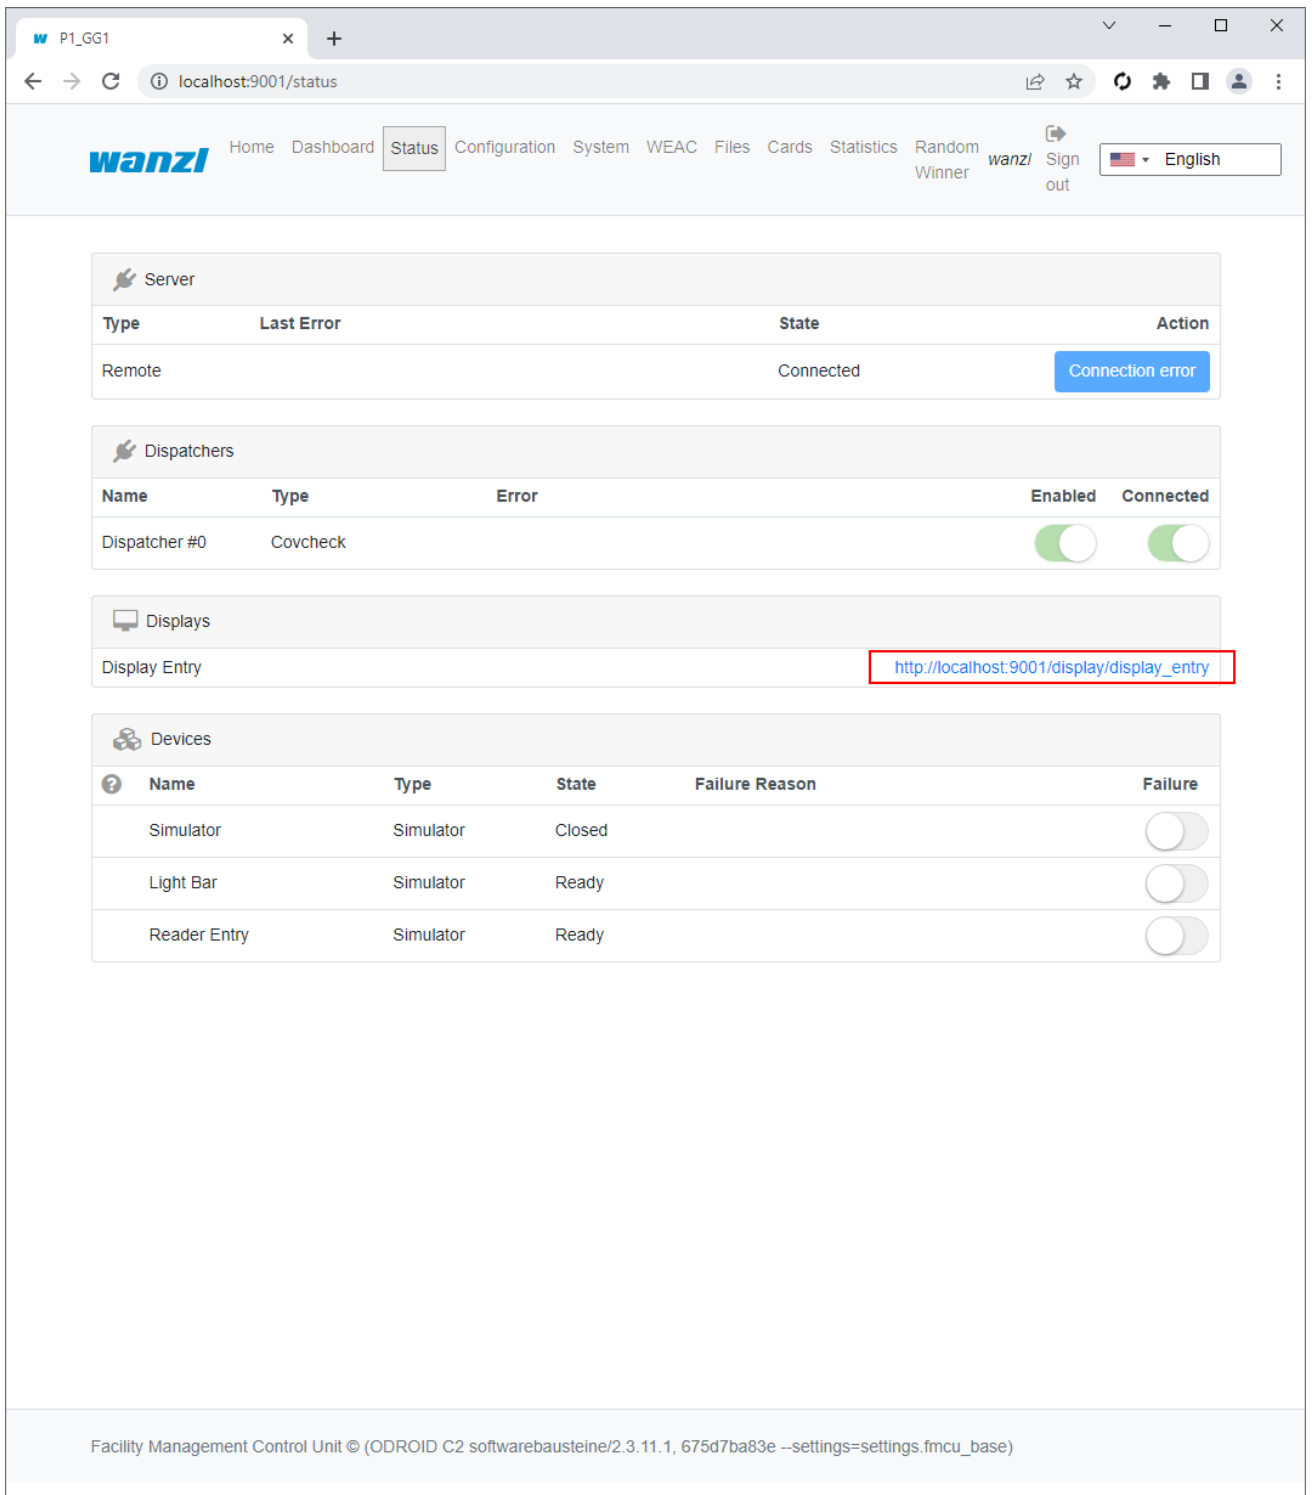

- Display Gate Covcheck**: A dropdown menu with 'Display Gate Covcheck' selected.
- Rotate**: A toggle switch, currently off.
- Show background**: A toggle switch, currently on.
- Is any barcode valid**: A toggle switch, currently off.
- Content module ***: A text input field containing 'covcheck'.
- Image name ***: A dropdown menu with 'main.svg' selected.
- Gate side ***: A dropdown menu with 'Entry' selected.
- Name ***: A text input field containing 'Display Entry'.
- Feedback Interval(seconds) ***: A text input field containing '2'.
- Custom layers (comma-separated pairs of existing names to custom names, e.g. idle:alles_gute)**: An empty text input field.

At the bottom of the configuration area are buttons for 'Select File', 'Upload', 'Download', and 'Cancel'. Below the configuration area, it says 'No Entries' and there is a green arrow button pointing up.

Restart the gate:

Navigate to the **Status** page and open the link corresponding to the display:

The screenshot shows a web browser window with the URL `localhost:9001/status`. The page is titled "wanzi" and has a navigation menu with "Home", "Dashboard", "Status", "Configuration", "System", "WEAC", "Files", "Cards", "Statistics", "Random Winner", and "Sign out". The "Status" section is active. Below the navigation, there are four main sections:

- Server:** A table with columns "Type", "Last Error", "State", and "Action". It shows a "Remote" server with state "Connected" and a "Connection error" button.
- Dispatchers:** A table with columns "Name", "Type", "Error", "Enabled", and "Connected". It shows "Dispatcher #0" of type "Covcheck" with both "Enabled" and "Connected" toggles turned on.
- Displays:** A table with columns "Display Entry" and "Action". The "Display Entry" is "http://localhost:9001/display/display_entry", which is highlighted with a red box.
- Devices:** A table with columns "Name", "Type", "State", "Failure Reason", and "Failure". It lists three devices: "Simulator" (Closed), "Light Bar" (Ready), and "Reader Entry" (Ready), each with a "Failure" toggle.

At the bottom of the page, there is a footer: "Facility Management Control Unit © (ODROID C2 softwarebausteine/2.3.11.1, 675d7ba83e --settings=settings.fmcu_base)".

The following screen for the idle state invites to present a COVID certificate:

When in addition a test certificate is required, the next screen asks to show it:

The screenshot shows a web browser window with the address bar containing 'localhost:9001/display/display_er' and 'localhost:9001/display/display_entry'. The main content area has a light blue background and features a blue icon of a hand holding a smartphone. Below the icon, the text reads 'Bitte Test-Zertificat scannen' in a large, bold, blue font. At the bottom, there is a large blue number '5' followed by a blue hourglass icon.
