Prepare KBOX A-330-RPI

Download image

Version	Download Link
1.3.0.1	http://nas0.dnsalias.com:5000/sharing/wZzteL0s7

Copy image to the Micro SD Card

1. Download an image from the table above
2. Extract an archive
3. Use utility **HDDRawCopy1.10Portable** from the archive to copy the image on the Micro SD Card

Setup XOVIS cameras

Add XOVIS cameras

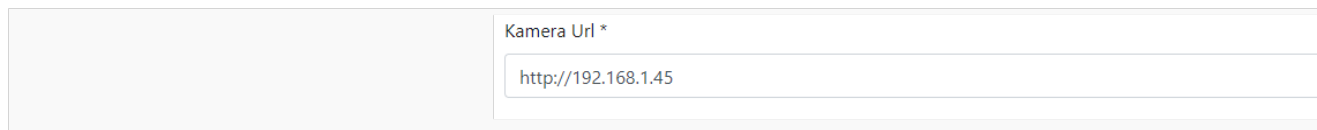

1. To add a new XOVIS camera, you firstly need to select the **Devices/ Geräte** tab.

2. Click on the **Add/ Hinzufügen** button.

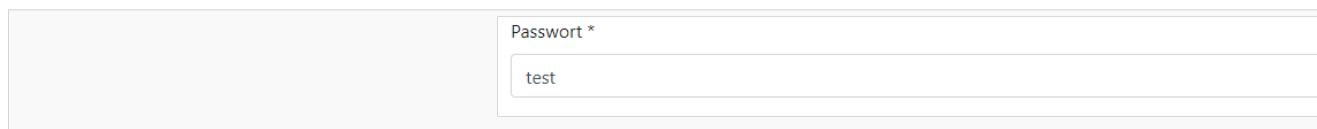

3. Here you should specify the camera URL.

A screenshot of a form field labeled 'Kamera Url *'. The input field contains the text 'http://192.168.1.45'.

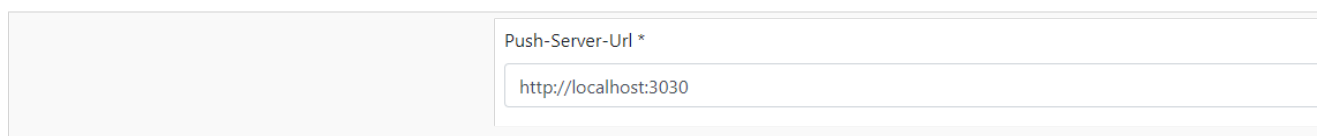

4. Specify a login to access the camera.

A screenshot of a form field labeled 'Anmeldung *'. The input field contains the text 'test'.

5. Specify a password to access the camera.

A screenshot of a form field labeled 'Passwort *'. The input field contains the text 'test'.

6. In this field specify the URL of your server (this field will be used for PUSH notification configuration on the camera side).

A screenshot of a form field labeled 'Push-Server-Url *'. The input field contains the text 'http://localhost:3030'.

7. Save it.

A screenshot of a form with two buttons at the bottom right: a green button with a checkmark and the text 'Speichern' (Save), and a blue button with an 'X' and the text 'Abbrechen' (Cancel). The 'Speichern' button is highlighted with a red box.

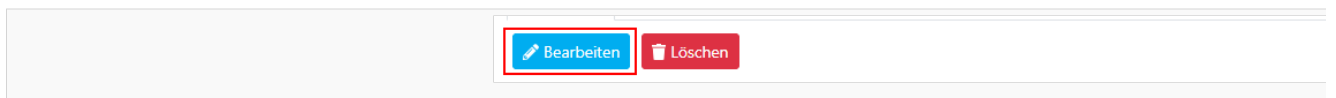

Change camera credentials

1. If you want to change camera data just click on the camera list area.

A screenshot of a camera list area. It shows a checkbox labeled 'Kamera Url' and a list item 'demo' with a checkbox next to it.

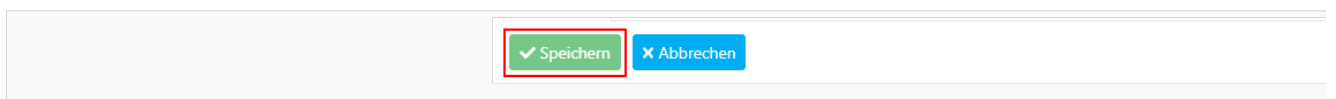

2 Then click on the **Edit/ Bearbeiten** button.

A screenshot of a form with two buttons at the bottom right: a blue button with a pencil icon and the text 'Bearbeiten' (Edit), and a red button with a trash can icon and the text 'Löschen' (Delete). The 'Bearbeiten' button is highlighted with a red box.

3. After that you can change camera data.

4. And save changes.

A screenshot of a form with two buttons at the bottom right: a green button with a checkmark and the text 'Speichern' (Save), and a blue button with an 'X' and the text 'Abbrechen' (Cancel). The 'Speichern' button is highlighted with a red box.

Delete API cameras.

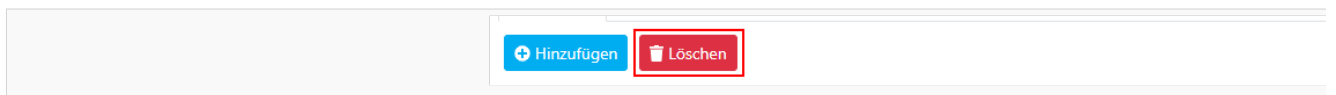

HINWEIS

Be careful! Do not remove cameras that are used.

1. To remove unwanted cameras, mark them.

12. Enter the name line.

	Kamera ▾	Typ erkennen ▾	Name der
	<input type="text" value="demo"/>	<input type="text" value="Line"/>	<input type="text" value="Line 0"/>

13. Here we specify the maximum capacity of the number of people.

	Kapazität *
	10

14. Here you can specify the schedule restart counter time. If you need to specify more than 2 values, be sure to separate them with a semicolon.

	Zeitplan für das Zurücksetzen des Zählers
	06:00;18:00

If you need to change the text translation on Dashboard by interval:

15. To add the ability to select a language, click the **Add/ Hinzufügen** button as many times as you need the languages.

	<input type="button" value="Hinzufügen"/>
--	---

16. Choose a language.

	Sprachen ▾
	English
	Deutsch

17. Enter the language switching interval in seconds.

	Sprach-Timeout(Sec)
	10

18. And save it.

	<input type="button" value="✓ Speichern"/> <input type="button" value="✗ Abbrechen"/>
--	---

Change Dashboard credentials

1. If you want to change dashboard data just click on the dashboard list area.

	<input type="checkbox"/> Name
	<input type="checkbox"/> Demo

People Counter Dashboard

2. Then click on the **Edit/ Bearbeiten** button.

3. After that you can change dashboard data. 4. And save changes.

Delete Dashboard.

1. To remove unwanted Dashboard, mark them.

2. And then click on the **Delete/ Löschen** button.

Setup Executable Devices

Add Executable Devices

1. To add a new executable device, you firstly need to select the **Devices/ Geräte** tab.

2. Select the **Executable Devices/ Ausführbare Geräte** tab.

3. And then click on the **Add/ Hinzufügen** button.

4. Select the type of executable device communication protocol.

5. Here you should specify the executable device URL.

	URL-Adresse * udp://192.168.1.10:12345
--	---

6. And Save it.

	<input type="button" value="✓ Speichern"/> <input type="button" value="✗ Abbrechen"/>
--	---

Change Executable Device credentials

1. If you want to change executable device data just click on the executable device list area.

	<input type="checkbox"/> Name
	<input type="checkbox"/> udp://192.168.1.10:12345

2. Then click on the **Edit/ Bearbeiten** button.

	<input type="button" value="✎ Bearbeiten"/> <input type="button" value="🗑 Löschen"/>
--	--

3. After that you can change executable device data.

4. And save changes.

	<input type="button" value="✓ Speichern"/> <input type="button" value="✗ Abbrechen"/>
--	---

Delete Executable Device

1. To remove an executable device, mark them.

2. Be careful! Do not remove an executable device that is used. Click on the **Delete/ Löschen** button.

	<input type="button" value="➕ Hinzufügen"/> <input type="button" value="🗑 Löschen"/>
--	--

Additional field designations.

Command Information/ Kommando-Informationen contains information about commands to control the device.

Kommando-Informationen

- FF0100 - Relay 1 OFF command (ASCII encoding)
- FF0101 - Relay 1 ON command (ASCII encoding)
- FF0200 - Relay 2 OFF command (ASCII encoding)
- FF0201 - Relay 2 ON command (ASCII encoding)
- FF0300 - Relay 3 OFF command (ASCII encoding)
- FF0301 - Relay 3 ON command (ASCII encoding)
- FF0400 - Relay 4 OFF command (ASCII encoding)
- FF0401 - Relay 4 ON command (ASCII encoding)
- FFE000 - All relays OFF command (ASCII encoding)
- FFE003 - All relays ON command (ASCII encoding)

Setup Output Signals of Executable Device

Add Output Signals

1. To add new output signals, you firstly need to select the **Devices/ Geräte** tab.

 Zuhause **Geräte** Dashboard System

2. Select the **Output Signals/ Ausgangssignale** tab.

3. And then to click on the **Add/ Hinzufügen** button.

+ Hinzufügen 🗑️ Löschen

4. Enter here the name of the output signals.

Name *

5. Here you should select an area.

Bereich *

6. Here you should choose the executable device URL.

	Ausführbare Gerät *
	udp://192.168.1.10:12345

7. Insert the command of a high level of the executable device.

	Hochrangiger Befehl ⓘ
	FF0101

8. Insert the command of a low level of the executable device.

	Befehl auf niedriger Ebene ⓘ
	FF0100

9. Here you can specify transition delay time.

	Impulszeit, ms
	0

10. This field is necessary to specify the condition of relay triggering.

	Bedingung *
	capacity <= count

11. Save it.

	<input type="button" value="✓ Speichern"/> <input type="button" value="✗ Abbrechen"/>
--	---

Change Output Signals credentials

1. If you want to change output signals data just click on the output signals list area.

	<input type="checkbox"/> Name
	<input type="checkbox"/> Test

2. Then click on the **Edit/ Bearbeiten** button.

	<input type="button" value="✎ Bearbeiten"/> <input type="button" value="🗑 Löschen"/>
--	--

3. After that you can change its data.

4. And save changes.

Delete Output Signals

1. To remove unwanted Output Signals, mark them.

2. Click on the **Delete/ Löschen** button.

Upload files to the server

Add Files.

1. Add a new area, you firstly need to go to Dashboard.

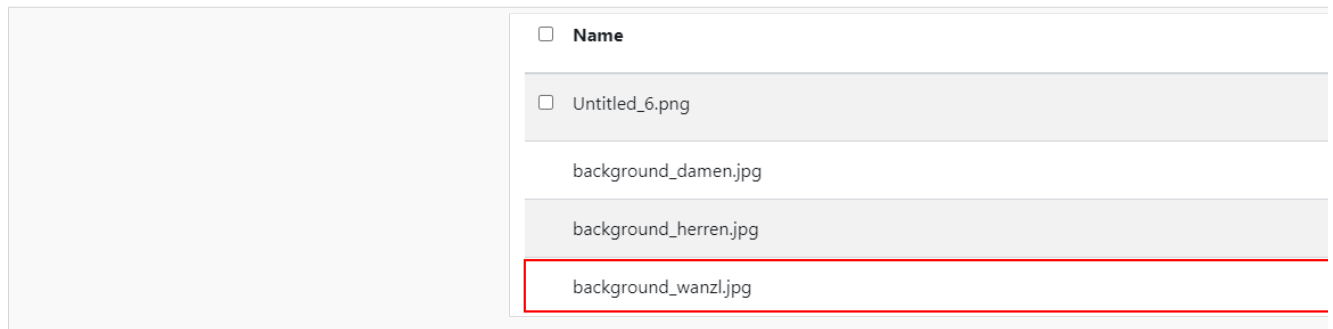

2. Select the **Image Assets/ Bild-Assets** tab.

3. If you need a mouse cursor to be displayed in the kiosk, tip this field.

4. Enter the display URL.

5. Click on the **Save** button.

6. Then click on the **Reboot** button.

Network

Network Setup.

1. To configure or view the network settings, you firstly need to go to **System**.

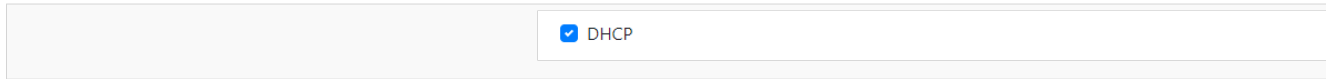

2. Select the **Network** tab.

There are two methods of network configuration.

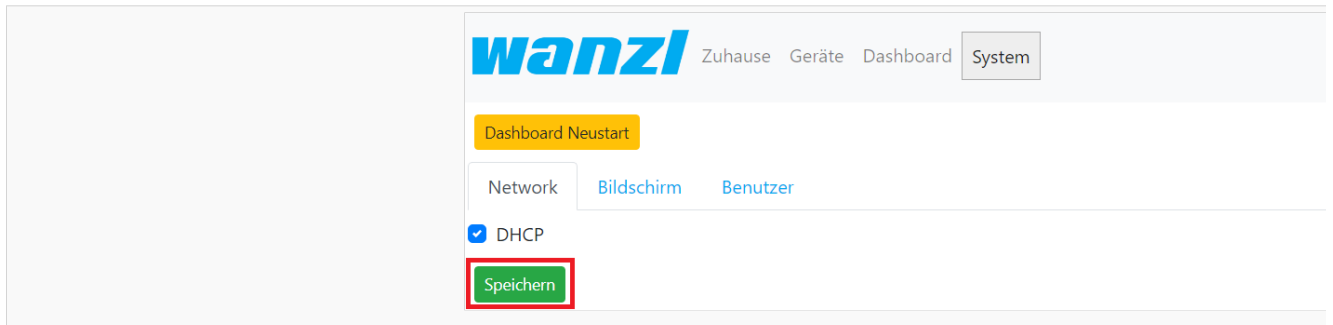

The first method:

- Tip the field.

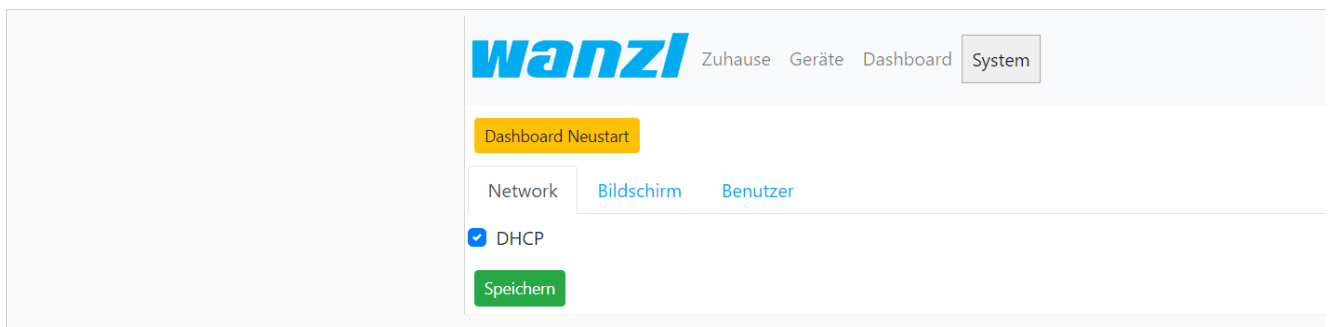

A screenshot of a web interface showing a single checkbox labeled "DHCP" which is checked. The checkbox is located within a light gray rectangular container.

- Click on the **Save** button.

A screenshot of the WANZI System settings page. The page has a header with the WANZI logo and navigation links: "Zuhause", "Geräte", "Dashboard", and "System". Below the header, there is a yellow button labeled "Dashboard Neustart". Underneath, there are tabs for "Network", "Bildschirm", and "Benutzer". The "Network" tab is active, showing a checked "DHCP" checkbox and a green button labeled "Speichern" which is highlighted with a red rectangular border.

- Then click **Reboot** button. And the DHCP server will automatically give the necessary settings.

A screenshot of the WANZI System settings page, identical to the previous one, but the "Speichern" button is no longer highlighted with a red border.

The second method:

- Specify an IP address.

	Address *
	192.168.1.66

- Enter netmask.

	Netmask *
	255.255.255.0

- Input address of the gateway.

	Gateway *
	192.168.1.1

- Now fill in the DNS IP address.

	DNS Server *
	8.8.8.8

- And then click on the *Reload* button.

	<input type="button" value="Reload"/>
